

The story

Founded in 2005 by 2 telecom enthusiasts, BJT Partners - now Ringover Group - was always about developing user-friendly communication solutions (Standardfacile, Monfax, Soconference, Simplicitel and RépondeurDirect) for making professional exchange easier. Although the beta service opened in 2016, Ringover's true launch happened in 2018.

The project

Cloud telephony (VoIP) has grown by leaps and bounds over the past few years, allowing us to offer companies a quality, reliable phone system that provides numerous collaborative features (shared contacts, IVR, call transfer/invitation, double-listening, etc.)

The idea

We set out on a simple premise: communication tools were complicated, limited, and expensive. We wanted to change the business phone system from a necessary evil to a powerful communication and productivity tool that could be used from anywhere, anytime, and set up in few clicks.

The founders

2002 was when the 2 telecom enthusiasts, Jean-Samuel Najnudel, President, and Renaud Charvet, CEO, took up the challenge of simplifying the telecom universe and offering value-added services through the cloud.

Jean-Samuel Najnudel - Co-founder and President

Self-taught and curious, Jean-Samuel has always been fascinated by telecom, IT and electronics. As a Finance major at ESCP, he met Renaud, with whom he would later start working on simple and intuitive communication solutions for professionals. His true passion? Jean-Samuel is a gastronomy fan!

Renaud Charvet - Co-founder and CEO

Renaud has always wanted to revolutionize the world of business. After studying Finance at ESCP, he began his entrepreneurial pursuits, co-founding Ringover with Jean-Sam in Paris in 2005. It's now been 15 years since they started making telecom easier and providing value-added services through the cloud. His hidden talent? Renaud is a France Grandes Ecoles Aviron champion rower!

Ludovic Rateau - CTO

Specializing in networks and infrastructure, Ludovic worked for many years as an R&D engineer for the ministry of armed forces. In 2015, he asked Renaud and Jean-Samuel to work on a new generation of business telephony adapted to new work trends (remote work, mobility, coworking, freelancing, etc.) The Ringover project was born! A graduate of the ESIEA, he also practices the half marathon and Krav Maga.
